

Your Source for Superior Components

Lakewood Automation is a leading distributor for top of the line Automated control system components from the nation's leading suppliers.

We can help you to select the right equipment for the following applications:

- Electronic Controls
- Machine Vision Integration
- Pneumatic
- Power Transmission
- Safety
- Training

And if the components you need are not available from our standard suppliers, we'll find them for you.

Our goal is simple: We're here to make sure you get what you need and when you need it.

A History of Excellence

For more than 50 years, Lakewood Automation has helped manufacturers as a distributor of top-line automated control systems from the leading suppliers. We have more than 20 years in both application and PLC experience.

Our employees are experts in machine control system design, implementation, and troubleshooting. From initial concept to finished product, our staff will bring experience and knowledge that results in the automation solution that's perfectly suited for your unique needs – and a solution that you can depend on for years to come.

Automation Design and Field Services

Lakewood Automation: Your Design and Support Partner

You want manufacturing systems that are efficient, trouble-free, and built to your specifications and requirements.

Lakewood Automation is your design and field service partner.

From application concept to installation and components to spot service, Lakewood Automation takes the questions and uncertainties out of application design, implementation, and service.

Lakewood Automation's dedicated consultants provide specialized design services tailored to your unique needs from people with years of experience in application design.

Whether it's an existing basic manufacturing system or state-of-the-art quality control like Machine Vision Integration, Lakewood Automation is a leader in application solutions.

Our start-to-finish services include:

Design.

We work with you to design the machine control system that's right for you. We listen to what you need to accomplish and design a fully integrated system to meet your exacting requirements. From engineering to providing electrical

schematics to component selection, our design staff provides quality service built on years of experience.

Implementation.

Once your machine control system is designed, Lakewood Automation can supply and install the necessary components, start-up and debug the system, and train your employees. Our staff is committed to recommending the proper components, whether we distribute them or not. You are assured of components that are right for you.

Service.

Once your system is installed and operating, Lakewood Automation provides the service and troubleshooting to ensure that your system remains operating efficiently and that downtime is kept to a minimum. From routine maintenance to emergency service, we're there when you need us.

From concept to finished machine control system, Lakewood Automation means:

- Electrical Control System Design
- Program Development (PLC, HMI, Servo, and Vision System, etc.)
- Program Translation
- Start-up/Debugging
- Electrical Control System Documentation
- Training
- Spot Service

Lakewood Automation is your partner in the design, implementation, and service for your machine control systems needs.
